Why the Staples/Office Depot
Merger Should Be Blocked

APWU

American Postal Workers Union
May 2015

This report was prepared with research assistance from the AFL-CIO, as well as professionals retained by APWU to assess the impact of the proposed Staples/Office Depot merger. Additionally, the APWU reviewed and acknowledges "*Independent Economic Analysis of Proposed Staples/Office Depot Merger*," by Kenneth H. Thomas, Ph.D. of Miami, Florida, dated Feb. 23, 2015. Dr. Thomas is not affiliated with and is not being compensated by the APWU in any way.

NO SALE

Why the Staples/Office Depot
Merger Should Be Blocked

American Postal Workers Union
May 2015

Introduction

Are corporate mergers good for America?

Not always, says Robert J. Samuelson, an award-winning business and finance columnist for *The Washington Post*. “The popularity of M&A [mergers and acquisitions] actually involves economic weakness,” Samuelson wrote on April 13, 2015. “Unable to expand internally — by creating new products or entering new markets — companies rely on M&A for growth. However, what works for the firm may work less well for society. Although buying another company may enhance the acquiring firm’s innovation, it doesn’t add much to society’s.”

On February 4, 2015, Staples and Office Depot announced a \$6.3 billion merger to combine the two office supply superstore (OSS) companies.¹ If consummated, this merger will result in just one national chain of brick-and-mortar office-supply retail stores dominating the entire U.S. market. This transaction will not “add much” to our society.

In fact, this concentration of market power will almost certainly harm consumers, businesses and government. The proposed merger is currently under review by the Federal Trade Commission (FTC).² If approved, the Staples/Office Depot merger will cause exactly the type of competitive harm to consumers that this country’s antitrust laws are intended to prevent.

This is not the first time Staples and Office Depot have tried to merge. The two companies announced plans to merge in 1996, but the FTC won a federal injunction against it in 1997.³ The merger was abandoned in the face of the injunction.

In 2013, the FTC did not challenge the proposed merger of Office Depot and Office Max, the country second and third largest office superstore (OSS) companies.⁴ In a statement on its 2013 decision, the FTC observed

“the market for the sale of consumable office supplies has changed significantly” since 1997 when it took steps to block the previously attempted Staples/Office Depot merger.⁵ In its 2013 economic analysis, the FTC broadly defined the market for office supplies to include mass-market retailers like Wal-Mart and online retailers such as Amazon.

Reducing from three giant office supply chains down to two, however, is much different than reducing from two down to one. If both Staples and Office Depot remain as independent businesses, consumers will still have a choice; the two mega-chains compete head-to-head in 344 U.S. counties, representing more than three-quarters of the two companies’ combined superstore locations.

Roughly half of all Office Depot stores, in fact, are currently located within five miles of a Staples store. If the merger is approved, the new company is expected to close as many as 1,000 stores.⁶ In addition to the job loss and economic dislocation caused by these store closings, consumers all over the country will be left with just one major chain of stores that specializes in offering a full range of office supply products – a textbook environment for monopoly pricing and other anti-competitive practices.

This paper, an initial review of a complex financial transaction, outlines an overall framework for legal analysis and four reasons why the proposed Staples/Office Depot merger should be blocked under U.S. antitrust law.

Later APWU objections will focus in more detail on the negative effects a Staples/Office Depot merger will have on small businesses engaged in business-to-business (B2B) transactions and on state and local governments who acquire goods through Staples, what is sometimes referred to as B2G. In this document, we focus on consumer and business-to-consumer (B2C) transactions.

⁴ Federal Trade Commission, *Statement of the Federal Trade Commission Concerning the Proposed Merger of Office Depot, Inc. and OfficeMax, Inc.* FTC File No. 131-0104, November 1, 2013.

⁵ *Ibid.*

⁶ *Philly.com*, February 4, 2015, “1,000 stores likely to close, as Staples buys Office Depot.”

Framework for legal analysis:

The Federal Trade Commission should not approve this merger because it will substantially lessen market competition and tend to create a monopoly.

Reasons this merger should be blocked:

1. Mass market retailers, such as Target and Walmart, are not true office superstore competitors and cannot meet the needs of many office supply customers.
2. Once the office supply superstore market shrinks to a single company, it will never grow back. The barriers to entry are too high. This will leave the combined Staples/Office Depot mega-corporation as a de facto monopoly.
3. Internet retailers are not true competitors in the office supply market because they can't compete for business from the more than one in five U.S. households who do not have Internet access.
4. Higher prices and reduced choice – the inevitable consequence of a monopoly market – will cause disproportionate harm to communities of color and low-income households.

Framework for legal analysis

The Federal Trade Commission should not approve the acquisition of Office Depot by Staples because it will substantially lessen market competition and it will tend to create a monopoly.⁷ In making this determination, the FTC will need to analyze:

1. The “line of commerce” or product market in which to assess the transaction,
2. The “section of the country” or geographic market in which to assess the transaction,
3. The transaction’s probable effect of competition in the product and geographic markets.”⁸

Utilizing these guidelines, the proposed merger of Staples and Office Depot will substantially lessen market competition because, if approved, Staples will be the only remaining brick-and-mortar office supply superstore in the United States. Consumers will lose the positive impact of competition from the elimination of Office Depot (which absorbed Office Max in 2013).

In 1997, the FTC obtained an injunction against the previous proposed merger of Staples and Office Depot because of its impact on the relevant product market (specifically, in well-defined geographical submarkets).⁹ Although some of the particular markets may have altered, the FTC will now analyze which defined sub-markets still exist in 2015 and, beyond that, will be monopolized should the merger proceed.

For example, if the merger is approved, Staples will have far greater power to dictate prices for customers who do not shop on the Internet (a sizable consumer base) and other consumers who utilize brick-and-mortar office supply superstores. (See Section 3 below: “Internet retailers are not true competitors in the office supply market.”)

Further, the FTC should see that the proposed merger is not equivalent to the Office Max/Office Depot merger approved in November of 2013.¹⁰ When the FTC allowed the merger of Office Max with Office Depot, Staples remained to compete with the resultant entity. Going from three to two dedicated retailers is quite different from simply leaving the market to just one brick and mortar retailer. The FTC should not approve this “3 to 2 to 1” scenario, a patently anti-competitive result.

Another key issue will be the FTC’s adherence to the standard it set out in its recent challenge of the Sysco/US Foods merger. The FTC should recognize that the “extraordinarily high post-merger” market share will have ramifications for business-to-business (B2B) transactions, because Staples and Office Depot

⁷ See 15 U.S.C. §18.

⁸ *FTC v. Staples*, 970 F. Supp. 1066 (D.D.C. 1997) citing *United States v. Marine Bancorporation*, 418 U.S. 602, 618-623, *FTC v. Harbour Group Investments, L.P.*, 1990 WL 198819 (D.D.C. 1990).

⁹ *FTC v. Staples*, 970 F. Supp. 1066 (D.D.C. 1997).

¹⁰ FTC File No. 131-0104 (November 2013).

are the only “broad line distributors” for office supply contracts for large national corporate and government customers.¹¹ At a later date, the APWU will have additional comments concerning these business-to-business (B2B) and business-to-government (B2G) impacts.

This proposed merger faces other legal scrutiny. Shareholders have filed suit against Office Depot and its Board of Directors in Palm Beach County, Florida, alleging breach of the fiduciary duties of loyalty and due care owed to shareholders. They have proposed a class action lawsuit.¹² Other such challenges may be forthcoming.

1. Mass market retailers, such as Target and Walmart, are not true office superstore competitors and cannot meet many customers’ needs.

The office supply needs of many American consumers can only be met through the breadth and depth of product offerings available at an office supply superstore. These stores offer greater choice for consumers than mass-market retailers, qualitative factors that distinguish the office supply marketplace from mass-market retailers. These qualities are at risk of disappearing if the OSS market shrinks to a single monopolistic supplier.

To take just one example, American consumers and businesses use hundreds of different brands and models of inkjet printers, each requiring a different cartridge for refill. A typical Office Depot or Staples will have dozens of different cartridges. Since many of the two chains’ stores are located near one another, consumers can easily shop for the best deal.

Target or Walmart, by contrast, usually stock just a handful of the most popular ink cartridges. If you need a different brand or model, these mass-market retailers don’t offer real competition with an office supply superstore. A merged Office Depot and Staples will

soon become the only source for certain goods –and consumers will inevitably pay higher prices when a single operator controls an entire market.

The FTC’s 2013 analysis of the Office Depot/Office Max merger reviewed the reduction of three major chains down to two, not the more drastic reduction of two competing companies into a single monopoly. As such, it did not adequately consider the differentiated nature of consumers for office supplies. The retail market for office supplies consists of distinct customer groups, including retail shoppers, home office workers, small businesses and large businesses, and students, parents and teachers shopping for school supplies.

The FTC’s 2013 statement on the Office Depot/Office Max merger noted that mass merchants such as Wal-Mart and Target have become more numerous and that these retailers include office supplies among their product offerings.¹³ The FTC observed that as a result “fewer consumers today shop OSS as a destination. Instead, consumers place a greater premium on convenience.”¹⁴ However, this analysis fails to consider market impact on those consumers whose needs are not satisfied by the product offerings of mass-market retailers.

The essential characteristic of the OSS retail sector is that stores provide a single venue where virtually all office supply needs can be met. In other words, the OSS market uniquely serves certain consumers’ needs to find, compare and purchase in a *single shopping venue* the thousands of highly specific office supply products that are not generally available at merchants who do not specialize in office supplies.¹⁵ While the market for basic office supplies may include many non-OSS shopping venues, the market that serves these particular customers’ varied office supply needs cannot.

Critical to the FTC’s 2013 approval of the Office Depot/Office Max merger was the fact

¹¹ *Statement of the Federal Trade Commission, Sysco Corporation, USF Corporation and US Foods, Inc.*, FTC Docket Complaint No. 9364 (February 2.15).

¹² See *John Sweatman v. Office Depot, Inc. et al.*, Case No.502015CA0017111XXXXMB (Fla. Cir. Ct. 2015).

¹³ *Ibid.*

¹⁴ *Ibid.*

¹⁵ Staples, for instance, states that it offers more than 10,000 products under its own brand and these account for only 28% of the company’s 2014 sales. Page 3, Staples, 10-K, filed March 6, 2015

¹⁶ FTC, *Statement of the Federal Trade Commission Concerning the Proposed Merger of Office Depot, Inc. and OfficeMax, Inc.* FTC File No. 131-0104, November 1, 2013

that the combined company would continue to face strong competition from Staples.¹⁶ Combining the second and third largest OSS chains actually *improved* their ability to compete against Staples, thus providing consumers with improved alternatives in the marketplace.

Today, Staples and Office Depot compete head-to-head in 344 counties in the United States. The stores in these counties represent 76 percent of all of Staples and Office Depot superstore locations.¹⁷ The proposed merger will give the combined company an effective monopoly in the retail OSS marketplace, where now these stores must compete.

2. Once the office supply superstore market shrinks to a single monopolistic company, it will never grow back. The barriers to entry are too high.

If Staples is allowed to merge with Office Depot, it is highly unlikely that any new competitor will emerge to challenge the new behemoth. The barriers to entry in this sector are simply too high.

Effective operation of an office supply superstore chain requires a national and global supply chain and logistical networks that are not easily replicated. Staples, for example, has 51 distribution and fulfillment centers.¹⁸ Office Depot has 66 distribution centers and cross-dock facilities.¹⁹

In addition, both companies have supply chain sourcing offices in Shenzhen, China near the factories that produce many of the products that they sell.²⁰ Merging these two logistics networks will have anti-competitive effects that will not be easy to reverse.

No other office supply company exists with the nationwide and global reach of Staples and Office Depot. Once the two firms are combined, it is unlikely that any new competitor will be able to challenge the remaining monopoly.

3. Internet retailers are not true competitors in the office supply market, because they can't compete for business from U.S. households who do not have Internet access.

Consumers who have little or no access to Internet retailers will be harmed substantially by this proposed merger. For these consumers, Internet-based shopping *never* provides a competitive alternative to an office supply superstore, and they would be especially vulnerable to a decline in competition in the brick-and-mortar office supply marketplace. This is an issue even for those who have Internet access. The reality for many small businesses is that certain immediate and essential product needs, like a printer without toner, require same-day purchases.

Many Americans have little or no Internet service. According to the U.S. Census Bureau, more than one-fifth of the U.S. population – about 65 million people – lives in a household with no Internet subscription.²¹ No dial up, no cable, no wireless – no way to take advantage of online shopping sites that supposedly offer an alternative to brick-and-mortar office superstores.

For these people, Internet access is very limited. If they have any access to the Internet on computers at public libraries, at their workplace or at the homes of friends or neighbors, it is likely to be infrequent and circumscribed. When shopping for office supplies, these customers will have little opportunity to go online to comparison shop. The monopoly pricing power of a single office supply superstore chain will be especially harmful to these consumers, who will have few, if any, alternatives in the marketplace.

4. Higher prices and reduced choice – the inevitable consequence of a monopoly market – will cause disproportionate harm to communities of color and low-income households.

¹⁷ Calculated using Dun and Bradstreet business location data, accessed via Unicore on March 25, 2015.

¹⁸ Staples 10-K report to U.S. Securities and Exchange Commission, March 6, 2015, p. 51.

¹⁹ Office Depot 10-K report to U.S. Securities and Exchange Commission, February 24, 2015, p. 27.

²⁰ Staples 10-K, March 6, 2015, p. 3 and Office Depot 10-K, February 24, 2015, p. 6.

²¹ Page 6, *Computer and Internet Use in the United States: 2013, American Community Survey Reports*, US Census Bureau.

Minority households will be disproportionately impacted by the lack of access to Internet retailers that compete with a combined Staples/Office Depot. According to U.S. Census Bureau, 32.7 percent of African Americans and 28.9 percent of Hispanics live in a household without an Internet subscription, compared to 21 percent of the entire population.²²

With nearly a third of African American households and nearly 30 percent of Hispanic households lacking Internet access, the FTC must evaluate carefully the demographics of Staples' and Office Depot's retail customers to determine how the merger may harm communities of color.

Certain OSS customers are also prevented from using Internet retailers because they do not have a bank account or credit card account. *The 2013 FDIC National Survey of Unbanked and Underbanked Households* found that 7.7 percent of the households in the United States, or about 9.5 million households, are 'unbanked,' with no member of the household registered for a bank account of any kind.²³

Unbanked households rely almost exclusively on cash transactions. Even if these customers have access to the Internet, they will not have access to an electronic means of payment.

For these less affluent households, maintaining a competitive office supply superstore marketplace is critical. There are approximately 33 million individuals living in poverty in the 344 counties where Staples and Office Depot currently compete head-to-head.²⁴

In other words, 67 percent of the estimated 48.8 million people living in poverty in the United States currently have access to a Staples *and* an Office Depot in their county of residence.²⁵ Many of these households purchase school supplies for their school age children at Staples or Office Depot. In fact, 13.79 million of the individuals without Internet access at home are children.²⁶

These low-income households, living on tight budgets, will pay a high price if a single operator

in the office supply superstore market is able to use monopoly power to increase prices to consumers.

Conclusion

"The more things change, the more they stay the same." While much has changed in the market for office supplies since the FTC rejected an Office Depot and Staples in 1997, the core principle of that decision remains valid. Without adequate competition, consumers and businesses will suffer. The proposed merger is bad for our society; it fails to meet the tests required by U.S. antitrust law and should be rejected.

If allowed to go forward, this merger will result in a decline in true competition, creating an effective monopoly in the office supply superstore market. Mass-market retailers cannot offer the breadth and depth of consumer choice now made possible with competing office supply superstores. Internet retailers, another theoretical source of competition, cannot compete in the more than one-fifth of U.S. households with no Internet subscription.

New companies will be unable to challenge this new monopoly, due to high barriers to entry. No start-up firm will be able to match the national and global supply and logistics network of the remaining monopoly operator.

The proposed merger will harm American consumers, including individual households small and large businesses, and many units of government who are significant office supply customers.

The FTC should exercise its authority to block the Staples merger with Office Depot to protect customers from higher prices and other anti-competitive practices that will result from a monopoly in the office supply superstore market. Staples and Office Depot should remain as independent concerns, and government regulators need to send a simple message – NO SALE.
